

Road Grading Specs

6/22/2023

Spring Road Maintenance

1. The focus for us in the spring is to improve the roads as much as possible until the roads dry out. We consider this band-aid work to keep the roads as passable as possible.
2. We do not want material to be pushed into the ditch ever. Even if there is no ditch, do not push the dirt out where the ditch should be.
3. We want birms on the edge of the road to be avoided. Birms prevent water from reaching the ditch.

Summer Road Maintenance

1. We do not want material to be pushed into the ditch ever. Even if there is no ditch, do not push the dirt out where the ditch should be.
2. We want the potholes to be cut out completely to prevent them from recurring.
3. We want the road to have a crown everywhere possible, which is to say, we want a 4% grade on each side so water will shed to the ditch. Please let us know where it isn't possible so we can consider road improvements.
4. We want birms on the edge of the road to be avoided. Birms prevent water from reaching the ditch.
5. We need to receive invoices that are itemized by date, road, type of work, and charges.
For example, "6/12/2023 Pond Rd. spot grading \$300.00"
